

REQUIREMENT OF PROPOSED SYSTEM

4.1 MAIN MODULES OF THE SYSTEM:

There are basically three main modules in the systems.

- Admin User
- Registered User
- Visitor User

4.2 MODULE DESCRIPTION:

There are four modules in this system.

1) Admin User:

- Admin can login into the admin panel.
- Can add, update, or delete products.
- Can manage user accounts and their details.
- Can view and manage orders placed by customers.
- Has full control over the system for maintenance.

2) Registered User:

- Can create an account and login securely.
- Can browse products in different collections.
- Can check purchase history anytime.
- Can give reviews and feedback on products.
- Can add products to cart and place orders.

3) Visitor:

- Can browse the website without login.
- Can view product collections and details.
- Can check basic information like contact page.
- Cannot place an order until they register or login.
- Limited access compared to registered users.

4.3 FEATURES OF NEW SYSTEM:

- User can register and login their own account.
- A home page and menu are provided for easy navigation.
- Each user has a profile page where they can update details and check history.
- Shoes are shown in different collections like men, women, etc.
- A product details page gives the full information like price, description, and image.
- Users can add items to the card, update quantity, or remove them.
- All data like user info, orders, and products are stored automatically.
- A Contact Us page is there for support or queries.
- The design is user-friendly and works on different devices.
- The admin panel helps the admin to manage product, users, and orders.
- Users can also give reviews and feedback on product.
